

Lesson 2-7 • Catch-up

Reinforce Understanding

2.6 • 2.7 • 2.11 • 2.12 Catch-Up

I can show I am caught up on Lessons 2.6 • 2.7 • 2.11 • 2.12 by using each lesson's big idea in mixed practice.

Worked model

A ribbon 82.2 meters long is cut into 4 equal pieces. How long is each piece?

1. Write 82.2 inside the bracket with 4 outside. The divisor is already a whole number.
2. Put the quotient's decimal point straight above the point in 82.2, then start dividing.
3. Divide, multiply, subtract, bring down — one place-value column at a time.
4. An amount is still left over, so annex a zero to 82.2 and keep dividing.

Answer: Each piece is 20.55 meters long.

Practice

Complete each exercise. Show the reasoning that supports your answer.

1. (Lesson 2.6) What is $936 \div 12$?

Circle the letter of the best answer. Show how you know.

- A. 68
- B. 76
- C. 78
- D. 87

2. (Lesson 2.6) What is $2,485 \div 5$?

Circle the letter of the best answer. Show how you know.

- A. 487
- B. 496
- C. 497
- D. 507

3. (Lesson 2.7) What is $14.4 \div 1.2$?

Circle the letter of the best answer. Show how you know.

- A. 0.12
- B. 1.2
- C. 12
- D. 120
